

# MINI EXCAVATORS

Concrete solutions. Always.

**28zT**  
**35zT**

Operating weight 2.700 - 2.850 kg  
Engine Power 18,5 kW - 25,0 HP

Operating weight 3.350 - 3.500 kg  
Engine Power 18,5 kW - 25,0 HP

 **EUROCOMACH®**

The 28ZT and the 35ZT are equipped with a side heat engine: this allows the size of the cab to be increased. The blower fan improves engine cooling, making the cabin cooler and quieter for greater operator comfort.

# LIKE THE GREATEST, JUST SMALLER.

## DIMENSIONS

With zero tail swing you get optimal performance in confined spaces working in complete safety, focusing solely on the excavation operation, even with the cab door open, as it remains within the profile of the tracks.

All models can be equipped with four upright roll-bar protection or cab.

ZERO TAIL

# EVERY CONTROL IS IN YOUR HANDS.

For quick and easy machine operation, the tilting controls and auxiliary hydraulic system are located on the joysticks. In addition to them, on the right joystick, there is an additional roller with electrical hookup for a second auxiliary hydraulic system.

## COMMANDS AND CONTROLS

Both models have two travel modes: the first gear with reduced speed and high thrust, the second gear for faster travel speed; all controlled by a handy button on the dozer blade lever.

The travel can be controlled by the integrated movement levers and pedals.

The automatic two-speed gearbox intervenes when the excavator requires greater thrust: the shift from second to first gear occurs automatically when the work pressure increases (e.g. When steering on very muddy ground or when pushing with the blade). The system switches back to second gear when work conditions allows it again.

### STRAIGHT TRAVEL

In case of simultaneous control of the services and motion, the hydraulic system with variable displacement pumps simultaneously ensures the fluidity of movements and straight driving of the machine.

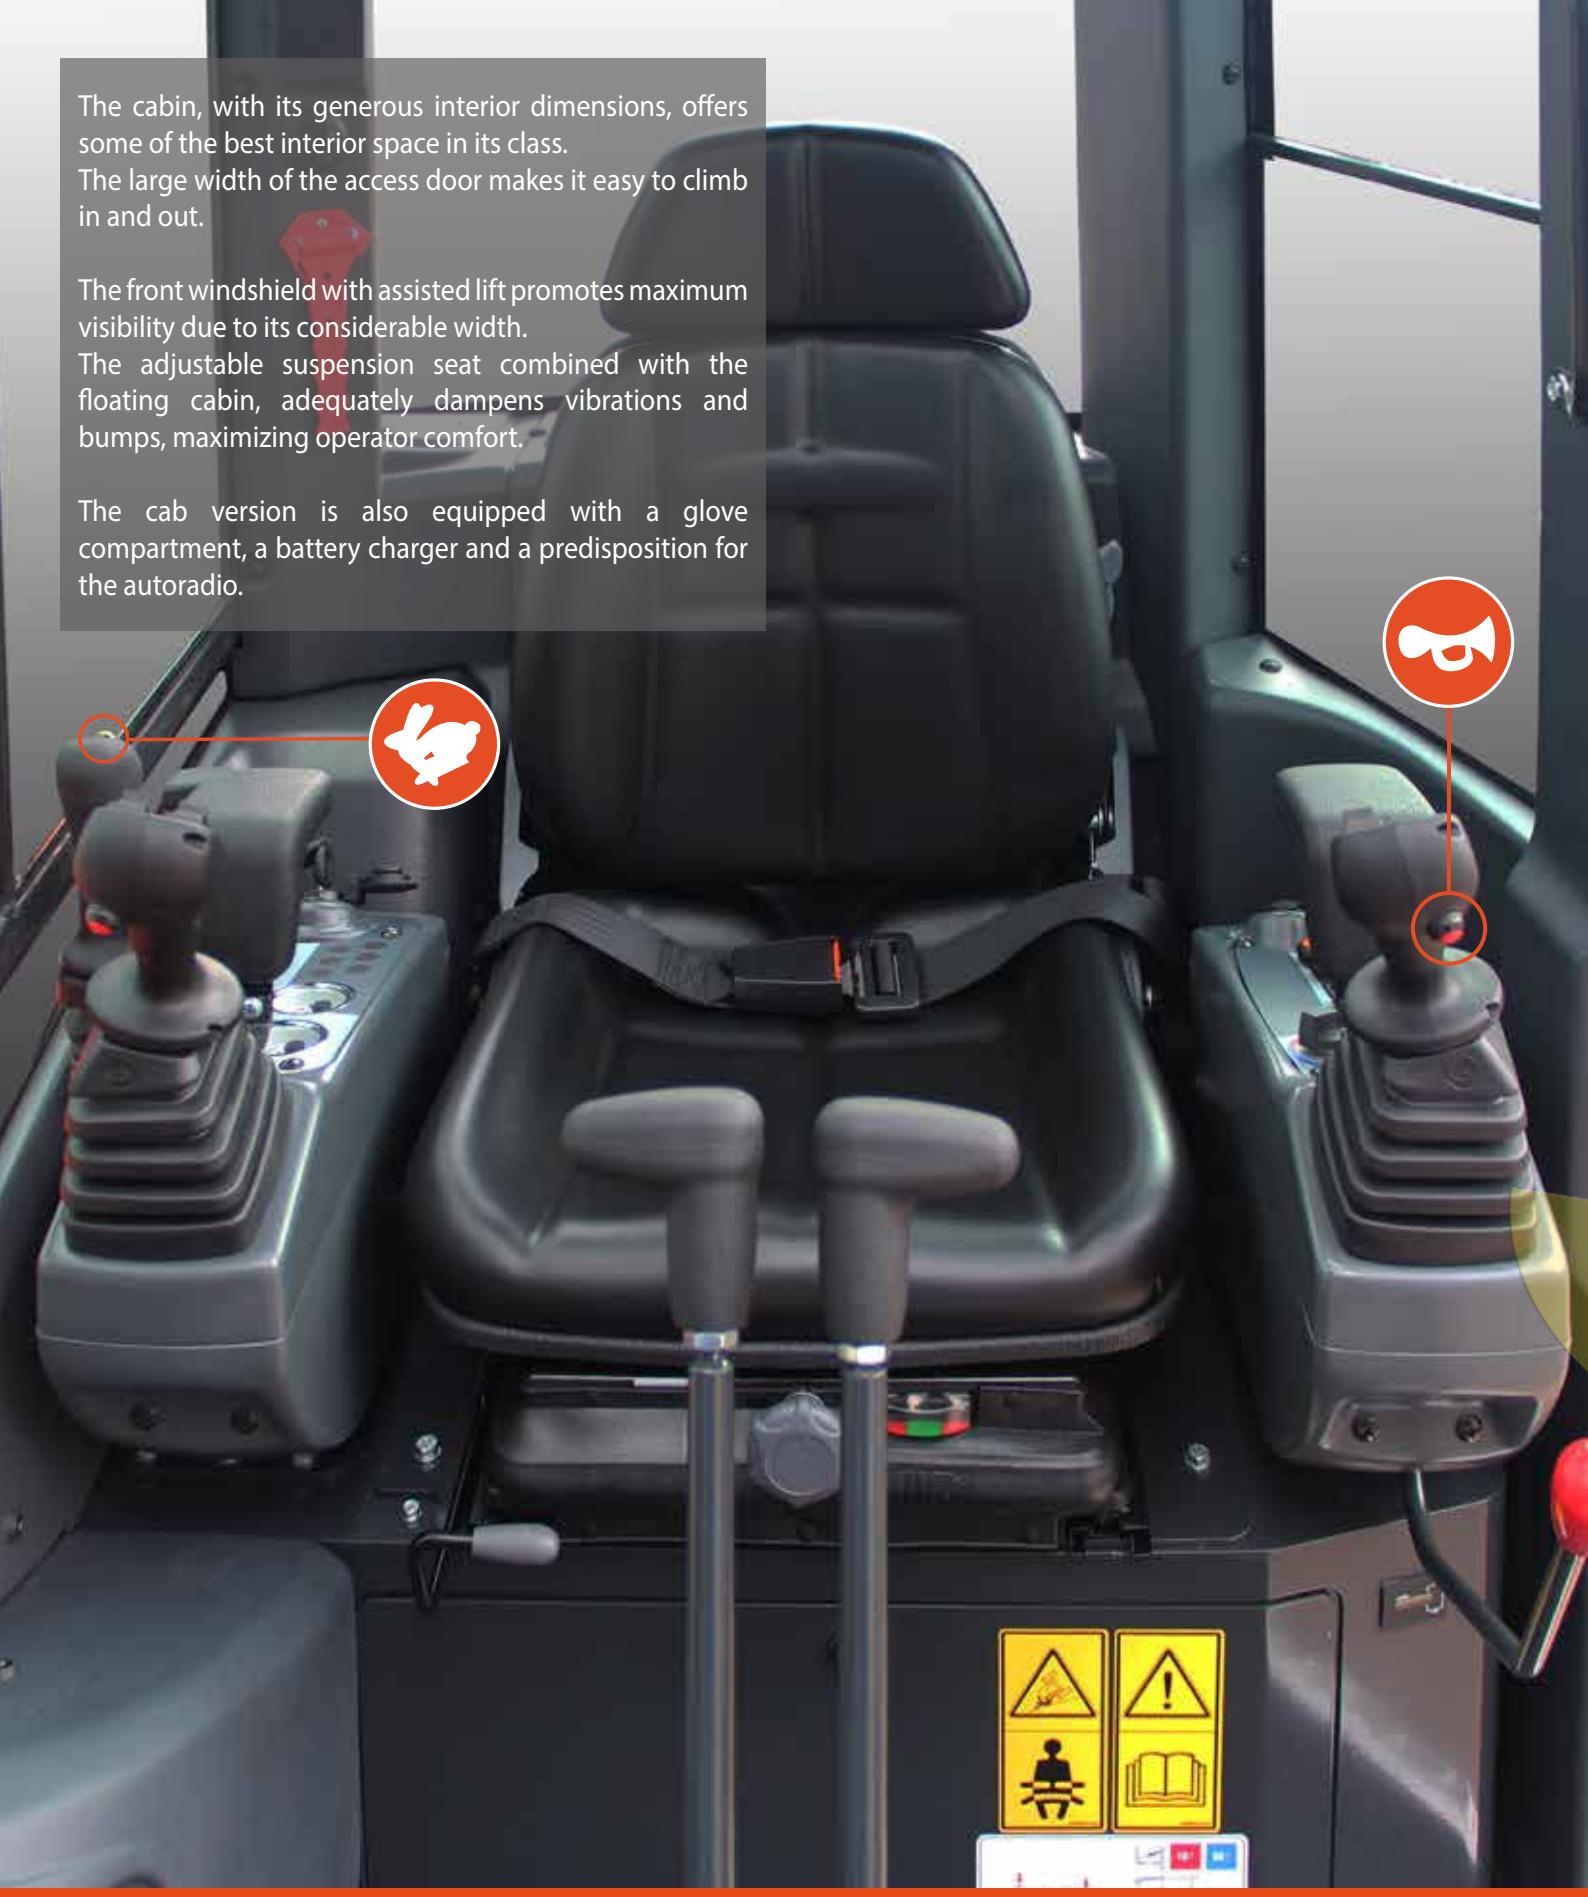

The cabin, with its generous interior dimensions, offers some of the best interior space in its class.

The large width of the access door makes it easy to climb in and out.

The front windshield with assisted lift promotes maximum visibility due to its considerable width.

The adjustable suspension seat combined with the floating cabin, adequately dampens vibrations and bumps, maximizing operator comfort.

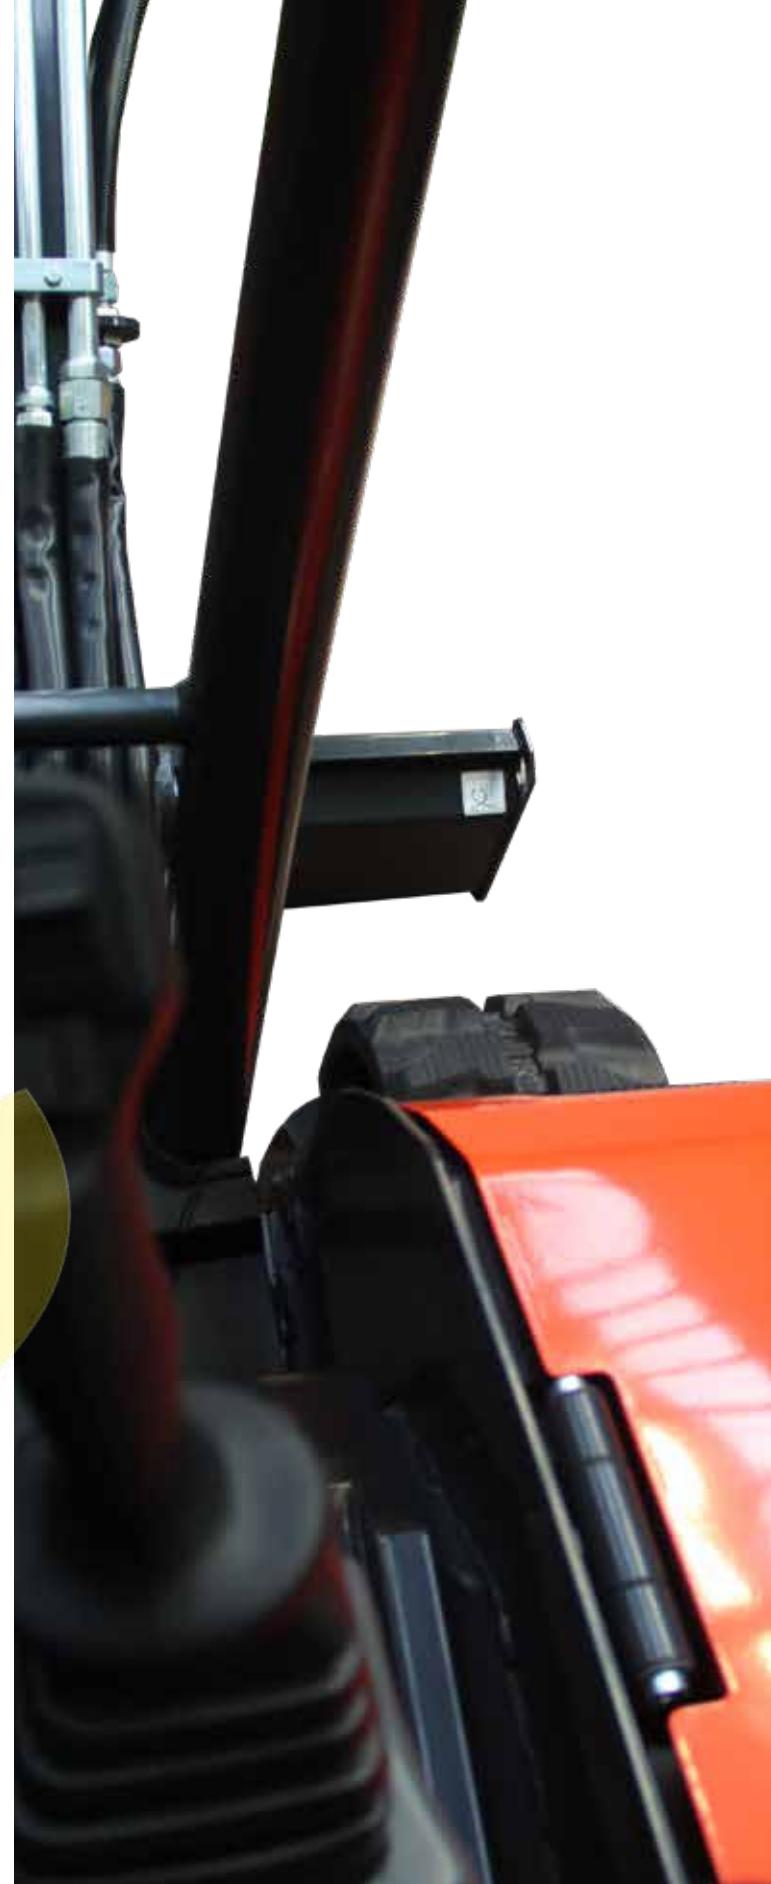

The cab version is also equipped with a glove compartment, a battery charger and a predisposition for the autoradio.

## VISIBILITY

The special design of the body and protective structures give the operator a wide field of vision, allowing easy control of the front tracked part.

The large windshield along with the upper rear window lets the operator keep an eye on the entire work area while remaining comfortably seated.

## WORK LIGHTS

A powerful light built into the arm optimizes visibility even with low lighting.

# POWERFUL, HIGH-PERFORMANCE, SUPERIOR CATEGORY.

## EFFICIENCY AND CONSUMPTION

The heart of the excavators is the efficient KUBOTA D1703-M-DI-E4B engine designed and built to optimize performance and reduce fuel consumption. The long intervals between programmed maintenance contribute to economic efficiency, reducing costs and machine downtime.

## SAFETY

Machine safety means operator's peace of mind: the joystick control sensors prevent accidental machine commands being given while the excavator starter system does not allow ignition when the command control is active.

The safety belts, the cabin and roll-bar structure, FOP level 1 and TOPS certificated, provide all the safety required in the cabin in the event of an accident.

# LOAD SENSING HYDRAULIC SYSTEM.

The 22SR and 35ZT are fitted with a Load Sensing system thanks to which the LS pump only feeds the flow rate requested by the system while the Flow Sharing distributor allows multiple movements to be carried out at the same time, even when the flow rate request exceeds the pump's maximum flow rate.

The pressure compensators on each section of the hydraulic system guarantee an optimal flow rate on each element. The machine offers high speed movements when unloaded and high pressure when working via the flow rate and pressure regulators.

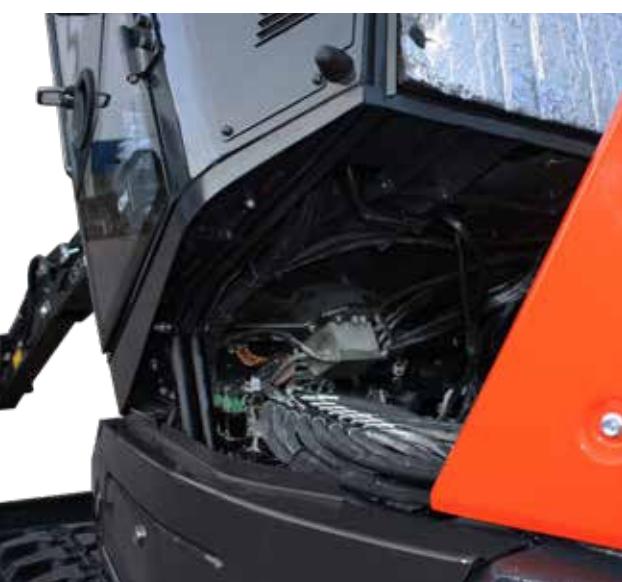

## SAVINGS

Thanks to a suitable power distribution, the Load Sensing system allows for up to 15% fuel savings.

# MAINTENANCE HAS NEVER BEEN SO EASY.

Quick and easy tipping of the cab gives easy access to the distributor and the main components of the hydraulic system: just a few gestures for major added value.

Easy routine maintenance simplifies service operations.

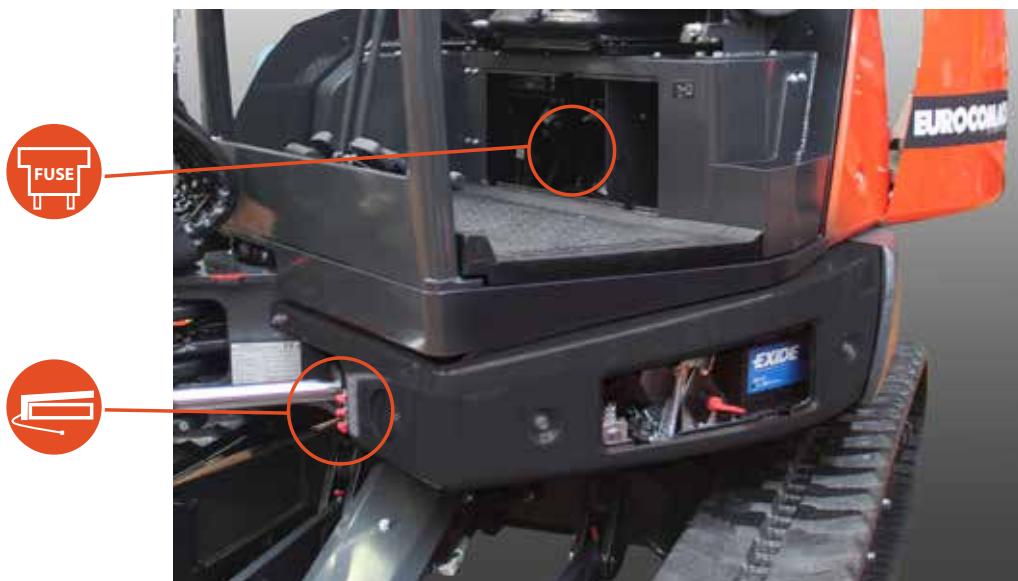

The rear bonnet allows quick cleaning of the radiator and access to the oil and fuel tank.

Services related to the heat engine are easily reached through a wide opening and the side compartment. All the filters (fuel, oil and air) in addition to checking and topping up the engine oil, are easily identified on the side.

All access points for daily checks and for routine maintenance are concentrated in defined areas, optimizing machine downtime.

SPACE FOR SERVICES.

#### ACCESSIBILITY

Common or dedicated access areas make every maintenance operation quick and easy.

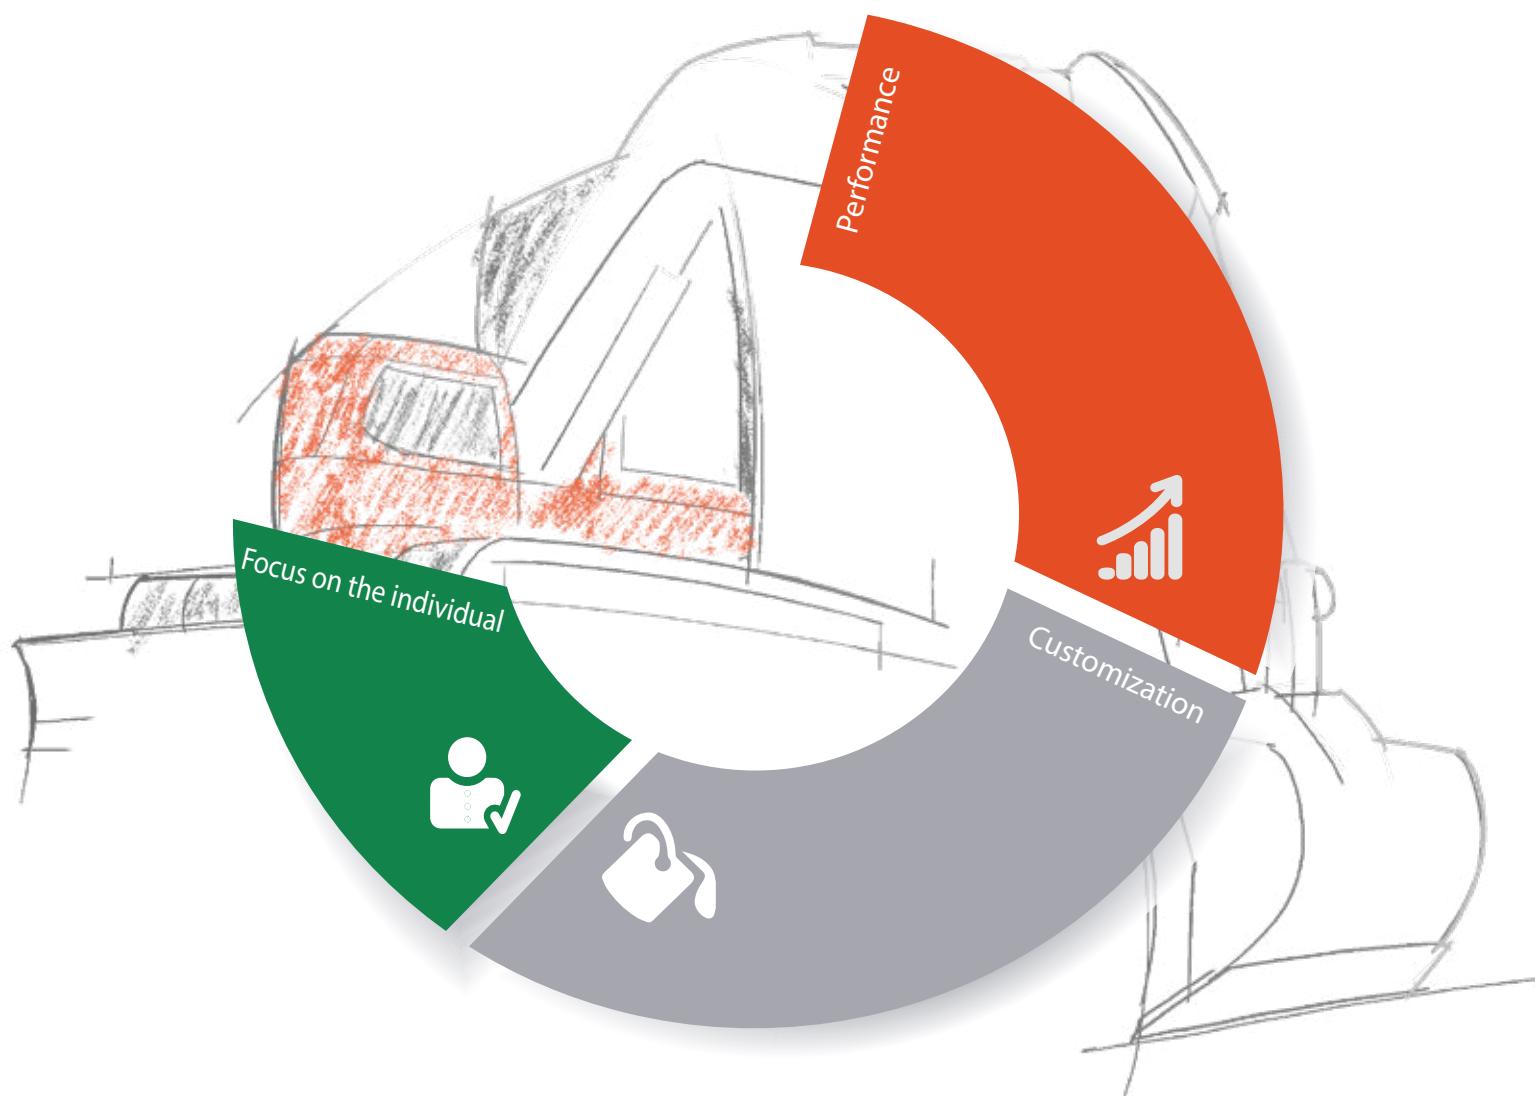

The front part of the turret does not overhang the tracks, which is why wall digging operations are extremely easy.

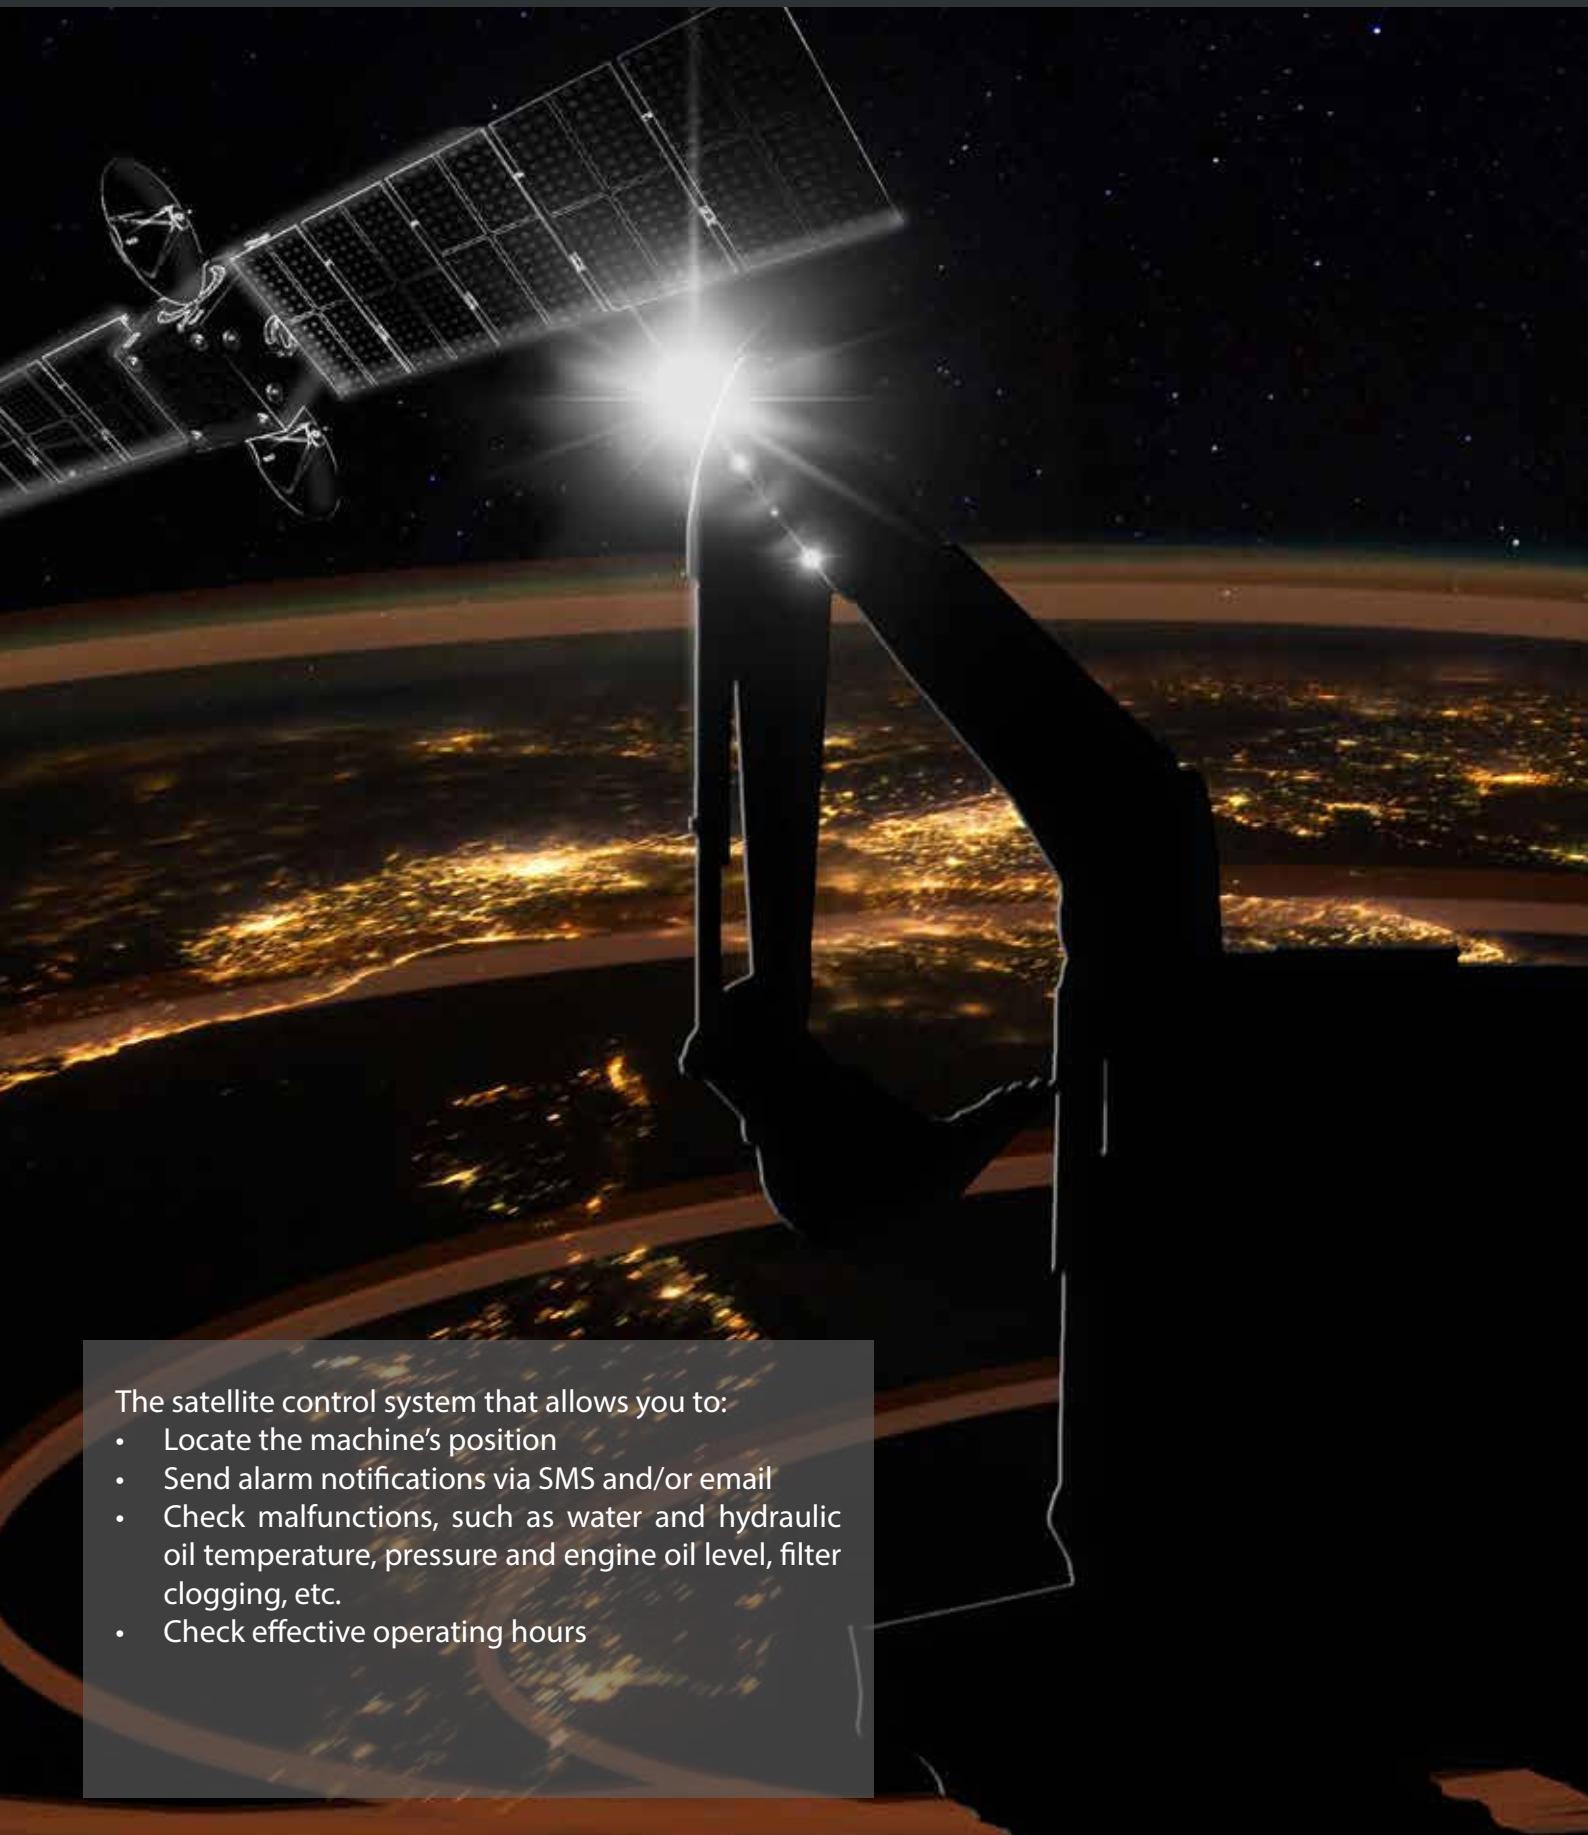

# EUROCOMACH CONFIGURATION SUPPORT (ECS): ENDLESS POSSIBILITIES OF CUSTOMIZATION.

We offer a complete customisation service, offering our customers the right machine for their needs. Some of our most requested services:

- Costumized paintwork
- Configuration of additional auxiliary lines
- Numerous assortment of additional equipment
- Various types of tracks

# EUROCOMACH GEO-SERVICE.

The satellite control system that allows you to:

- Locate the machine's position
- Send alarm notifications via SMS and/or email
- Check malfunctions, such as water and hydraulic oil temperature, pressure and engine oil level, filter clogging, etc.
- Check effective operating hours

## OPTIONAL EQUIPMENT SELECTION.

Certified and tested lifting hook and blocking valves with CE certification for material handling equipment

Supplementary external ballast

Single/double effect hydraulic system with electrical containment (50 lt/min)

Automatic centralized lubrication

Electronically controlled diesel filler pump

Electro-hydraulic proportional potentiometer to act the hydraulic systems on both Joysticks

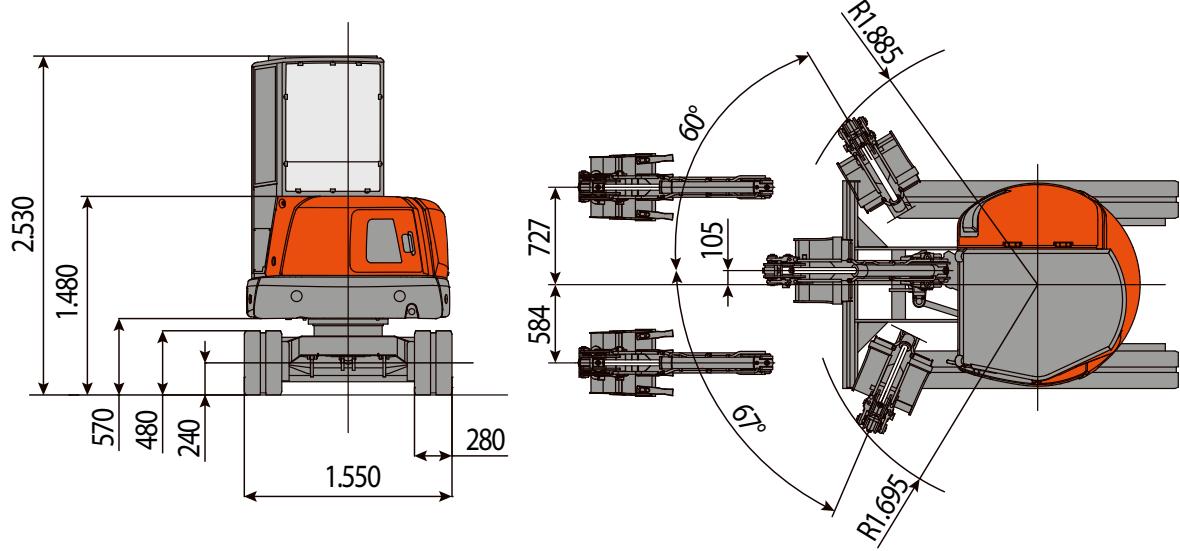

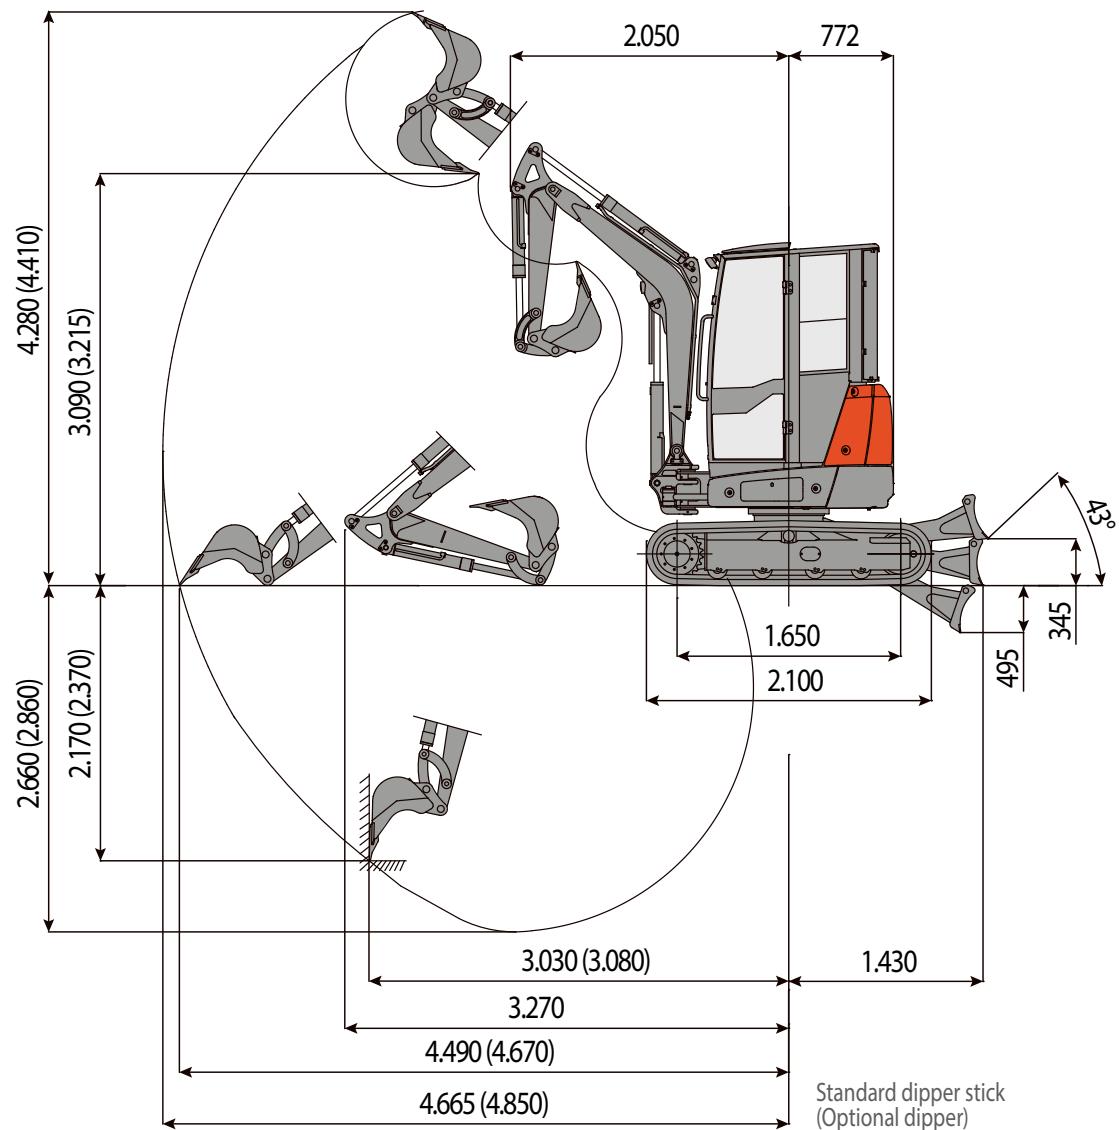

Customized paint

# LIFTING CAPACITY

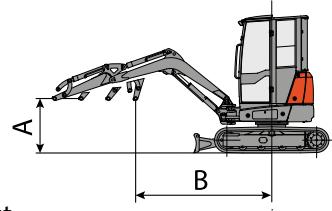

The lifting capacity is based on ISO 10567 and does not exceed 75% of the static tipping load or 87% of the hydraulic lifting capacity of the machine.

The straddle refers to the centre of rotation.

\* Indicates the hydraulic load limit.

0 m refers to ground level.

The machine is understood to be equipped with a cab, rubber tracks, without a bucket and without a quick coupling.
