

MINI EXCAVATORS

Concrete solutions. Always.

22SR

Operative weight 2,190 - 2,090 kg
Maximum power 15.4 kW - 20.9 HP

 **EUROCOMACH**[®]

With the new, more accessible and spacious cabin, the 22SR offers the same performance of larger machines. It's a short radius and agile machine, ideal for working in limited spaces.

350 mm

SHORT RADIUS

With its enlarged undercarriage, the rear extension is cut to a minimum (350 mm), meaning that it can also operate in very limited spaces.

LIKE THE BIG ONES BUT SMALLER.

DIMENSIONS

With its extendible undercarriage from 990 to 1,300 mm, the 22SR is an ultra-compact machine.

The smallest width allows it to operate in narrow spaces while the biggest guarantees even more stability and safety for the operator.

The 22SR can be configured with a protective canopy with four uprights or a cabin.

DESIGNED AROUND THE OPERATOR.

Thanks to the wide entry point (550 mm), the operator can get comfortably in and out of the cabin with the guaranteed accessibility of larger machines.

ACCESSIBILITY

The flat, obstacle-free floor facilitates for the operator and simplifies cabin cleaning.

A NEW LEVEL OF COMFORT.

The new cabin has been designed to provide the operator with maximum comfort. The cushioned, adjustable seat absorbs vibrations and jolting of the machine.

COMFORT

To minimise vibrations while working and in transit, the cabin is installed on four rubber, anti-vibration, silent blocks.

EVERY COMMAND IS IN YOUR HANDS.

COMMANDS AND CONTROLS

The 22SR has two travel modes: the first gear with reduced speed and high thrust, the second gear for faster travel speed; all controlled by a handy button on the dozer blade lever.

The travel can be controlled by the integrated movement levers and pedals.

The automatic two-speed gearbox intervenes when the excavator requires greater thrust: the shift from second to first gear occurs automatically when the work pressure increases (e.g. When steering on very muddy ground or when pushing with the blade). The system switches back to second gear when work conditions allows it again.

STRAIGHT TRAVEL

If travel and service commands are given together, the hydraulic system with variable rate pump guarantees fluid movements and straight travel of the machine at the same time.

AN EXCELLENT OVERVIEW OF THE WORKSITE.

VISIBILITY

The specific design of the bodywork and protective structure guarantee to the operator an extra-wide field of vision which allows him to easily control the overall size of the rear part of the track.

The seat is not only comfortable but also provides more leg space thanks to the new cabin, so the operator is free to work unhindered with an excellent overview of the worksite.

The side sliding window and liftable front windscreen (with gas springs) guarantee maximum visibility to the operator. The lower part of the windscreen slides into the frame of the upper section. Both sections, therefore, are lifted and placed on the roof, allowing the operator to increase the ventilation and visibility of the machine.

WORK LIGHTS

A powerful LED spotlight installed on the boom increases visibility when working in poor lightning conditions.

POWERFUL, HIGH-PERFORMANCE, SUPERIOR CATEGORY.

EFFICIENCY AND CONSUMPTION

The KUBOTA D1105 (1.100 cc) combustion engine produces 15.4 kW of power. The engine is installed in a handy position for maintenance work and complies with European Stage V emission standards, allowing the machine to achieve a high operating level whilst increasing the efficiency and cutting consumption.

The long intervals between scheduled maintenance work contribute towards economic efficiency, cutting the costs of machine downtime. All the access points for daily checks and regular maintenance work can be easily accessed and are concentrated in specific areas.

SAFETY

Machine safety means operator's peace of mind: the joystick control sensors prevent accidental machine commands being given while the excavator starter system does not allow ignition when the command control is active.

The safety belts, the cabin and roll-bar structure, FOP level 1 and TOPS certificated, provide all the safety required in the cabin in the event of an accident.

LOAD-SENSING HYDRAULIC SYSTEM.

The 22SR is fitted with a Load Sensing system thanks to which the LS pump only feeds the flow rate requested by the system while the Flow Sharing distributor allows multiple movements to be carried out at the same time, even when the flow rate request exceeds the pump's maximum flow rate.

The pressure compensators on each section of the hydraulic system guarantee an optimal flow rate on each element. The machine offers high speed movements when unloaded and high pressure when working via the flow rate and pressure regulators.

SAVINGS

Thanks to a suitable power distribution, the Load Sensing system allows for up to 15% fuel savings.

MAINTENANCE HAS NEVER BEEN SO EASY.

The fast and handy cabin tilting mechanism provides easy access to the distributor and main components of the hydraulic system: a few steps for a significant added value.

The cabin can be lifted up by simply opening the front hood and removing the two fastening screws.

INTEGRATED TANK

The diesel tank is conveniently integrated into the rear hood of the machine.

The large diesel tank, integrated into the rear bonnet, provides easy access and state of the art standard maintenance above that for this category.

Opening the bonnet provides quick access to all the combustion engine filters (diesel, oil and air) as well allow the diesel and motor oil to be topped up.

The side bonnet can be opened allowing the radiators and hydraulic oil filter to be inspected and cleaned.

All the access points for daily inspections and ordinary maintenance interventions are concentrated in defined areas, making the most of machine stop time.

ACCESSIBILITY

Common or dedicated access makes all servicing operations simple and quick.

SPACE AT YOUR DISPOSAL.

In both layouts, with either roll-bar or cabin, the 22SR is fitted with a spacious and handy rear glove box, ideal for storing the machine documentation and the regular maintenance kit.

In the layout with the cabin, the machine can be fitted with an air-conditioning system to allow the operator to work in comfort even when it is very hot outside. The system is fitted in the rear cabin compartment which makes it easy to access and does not interfere with the comfort of the cabin.

CANOPY VERSION

CAB VERSION

HEATING AND COOLING SYSTEM

The air vents are laid out so they provide rapid and even cooling.

DEVELOPED TO OFFER THE BEST PERFORMANCE.

In the standard layout, the arm provides the 22SR with exceptional performance levels: an excavation depth of 2,560 mm and a reach of 2,760 mm with the optional arm.

2.560 mm
(2.760 mm)

TRANSPORT ACCESSIBLE TO EVERYONE.

The compact dimensions and overall weight under 2.5 tons means it can be loaded on a trailer and transported along with other equipment and accessories.

TRANSPORTATION

The machine has four anchoring points on the tower frame which allow it to be safely transported.

EUROCOMACH CONFIGURATION SUPPORT (ECS): ENDLESS CUSTOMISATION POSSIBILITIES.

We offer a complete customisation service, offering our customers the right machine for their needs. Some of our most requested services:

- Customized paintwork
- Configuration of additional auxiliary lines
- Numerous assortment of additional equipment
- Various types of tracks

EUROCOMACH GEO-SERVICE.

The satellite control system that allows you to:

- Locate the machine's position
- Send alarm notifications via SMS and/or email
- Check malfunctions, such as water and hydraulic oil temperature, pressure and engine oil level, filter clogging, etc.
- Check effective operating hours

22SR	
ENGINE	
Diesel motor, 3 cylinders, 1,105 cc capacity, water cooled	●
Electric pre-warming	●
Dry air filter with discharge valve and indication of filter blockage	●

		200
PERFORMANCE		
Max digging depth standard arm (optional arm)	mm	2.560 (2.760)
Max dumping height with canopy standard arm (optional arm)	mm	2.650 (2.760)
Breakout force at bucket (standard arm) ISO 6015	daN	1.600
Arm break force (standard arm) ISO 6015	daN	1.000
Traction force	daN	1.900
Pressure on ground with rubber tracks and canopy (cabin)	kg/cm ²	0.34 (0.35)
Maximum slope	60% - 30°	
DIMENSIONS		
Maximum width	mm	990-1,300
Total height	mm	2.395
Rear rotation radius	mm	1.000
Digging arm length std (optional)	mm	1.250 (1.450)
Tracks width	mm	230
Rollers number (for each side)	No.	3
REFILLING		
Fuel tank	litres	20
Hydraulic oil tank	litres	16
Hydraulic circuit capacity	litres	25
Cooling system capacity	litres	4
Engine oil	litres	4.4
CONTROLS		
Boom, dipper stick, bucket and turret swing	2 Joysticks servo-assisted	
Track movements (included counter rotation)	2 servo-assisted levers	
Dozer blade	servo-assisted lever	
Auxiliary circuit (simple or double effect)	potentiometer control on RH joystick	
Boom swing	potentiometer control on LH joystick	

LIFTING CAPACITY

Lifting capacity is based on the ISO 10567 norm and does not exceed more than 75% of the static tipping load or 87% of the hydraulic lifting capacity of the machine.

Reach refers to the centre of rotation.

* Indicates the limits of the hydraulic load.

0 m refers to the level of the ground level.

For machines equipped with cab, rubber tracks, no bucket and no quick-release coupling.
